

Expense-Neutral Ownership

MicroMod can provide leasing solutions that give you all the benefits of equipment ownership without the prohibitive up-front costs. So you won't have to put off until tomorrow what you really need today.

We understand the financial challenges of businesses and municipalities. We know how to structure lease financing to meet your financial and fiduciary needs.

- Streamlined application and approval process
- 3-year, 5-year and 7-year options
- Full purchase price is spread over term of lease; at lease end you own the equipment for minimal payment
- Various Fair Market Value end-of-lease options available (i.e. FMV/10%, FMV/20%)
- Tax-Exempt Municipal Leases - structured so not to be considered general obligation debt, saving you time and the cost of additional approvals
- Saves you money and helps to improve cash flow by minimizing issuance cost
- Finance 100% of the acquisition costs — installation, shipping can be included in the lease agreement

Application smart solutions • Engineered to outperform

TVT Floating Bioreactors are designed, engineered, manufactured & supported in the USA

MicroMod Automation & Controls is headquartered in Rochester, NY, USA.

We offer both pre-engineered and custom solutions for a wide range of industries - solutions that begin with our in-depth knowledge of your applications and needs. By combining time-proven technology with superior process expertise, we offer you precision performance, and a new level of efficiency and economy.

Our engineers have distilled years of application experience into Best Practice solutions to save you time and money.

TVT-bio

Floating Aerobic Bio-Reactor Systems

Reduces odor, COD/BOD & sludge

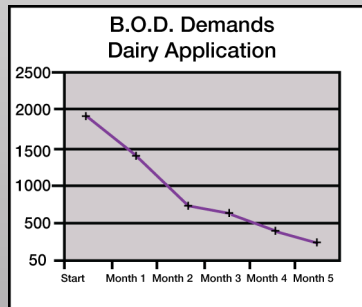

Reduces operating costs

Eliminates infrastructure

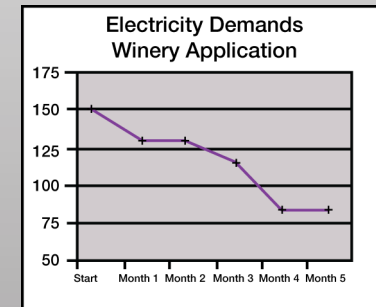

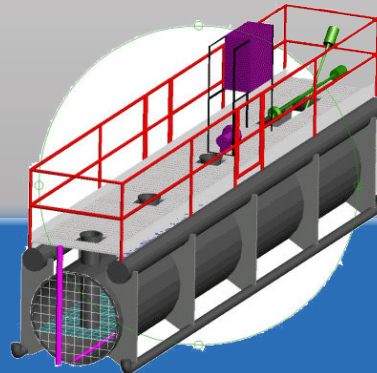

Easy transport, deployment & retrofit

Imagine an increased treatment capacity without the expense and headache of additional retention time or expensive new aerators. The TVT-bio floating treatment system can enhance your treatment efficiency, while utilizing your existing infrastructure. The secret is TVT's patented floating bioreactor. Precise design allows this reactor to enhance oxygen transfer over conventional means, while decreasing energy costs.

Payback in 12 – 24 months

- Improves microbiology
- Faster cycle times
- Suitable for lagoons, ponds or basins
- Extremely low energy usage
- Install any time, under any conditions

- Quickly mitigates non-compliance fines
- Works all winter in the ice
- Handles load variability
- Stops odor complaints
- Controls DO & pH
